7.1 Description:

The Frederick Eichelberger House is situated on Longs Mill Road in the vicinity of Rocky Ridge, Maryland. The two story stone house in two parts faces south towards Owens Creek. An important early mill associated with the house formerly operated on the creek. Along with the mill site, the complex with the house includes a substantial, one story stone outbuilding and late nineteenth- early twentieth century agricultural buildings.

The house was constructed in two sections, both stone: the original section, circa 1790, and the later section, circa 1830. The original house was two stories and 4 bays wide with an interior end stuccoed chimney. The gable roof runs east to west and is covered in standing seam tin. Notable detailing includes large stone quoining and a coved cornice. The larger, later section is 2 stories and 3 bays in width with 2 interior end stone chimneys and a gable roof of standing seam tin. Like the earlier section, it is distinguished by large stone quoining. It also has stone lintels.

The principal facades of both sections face south. The large main section has a symmetrical 3 bay facade with central door placement and flanking 6/6 windows with stone lintels. The door is slightly recessed and panelled with a large stone lintel and a 4 light transom. The eavline carries a wooden molded cornice. The original section had 2 central front doors (one was filled in) with arches above the doors. The door openings are flanked by 1/1 windows. The second story has 2 bays with 1/1 windows. A one story open porch is full facade width and lines up with the main section. A door from the main section enters onto the porch: it has a transom and sidelights.

The main section in the north elevation is 3 symmetrical bays wide with center door placement and 6/6 windows. The center window on the second story has placement directly above the first floor center door creating a different fenestration pattern. The original section has 2 openings, a door and a 1/1 window, on each story. The facade is covered with a double porch that lines up with the main section.

The west gable end of the main section has 2 bays on the first and second floors with 6/6 windows and 3 bays in the attic level with 4 windows in each bay. The east elevation reveals 2 attic windows in the main section. In the original section, there also 2 attic windows and no other openings.

The interior of the original section is one room in plan but was originally two rooms (hall-parlor) with a large cooking fireplace in the room closest to the east wall. Some chair rail remains in the room. The main section has a center hall, double pile plan. The two rooms along the south wall, the parlor and the dining room, are the most formal and contain Transitional and Greek Revival detailing. The parlor has astragal molding in the window surrounds and the chair rail. The fireplace mantel in this room has an elliptical curve in the shelf, Adamesque detailing in the frieze and architrave detached round columns. A ceiling medallion is also in the parlor. The rooms along the north wall are less formal. They contain Greek Revival molding seen in the corner blocks in the window and door surrounds and in another mantelpiece with an elliptical curve.

7.2 Description (Continued)

A one story, stone outbuilding sits adjacent to the house to the east and is banked into a hill allowing for an exposed basement level. It has a standing seam tin gable roof running east to west. The main facade faces south and has a side door into the basement level and 2 window openings on the second story. The north elevation has a 1/1 window in the basement level and a 4 light fixed window on the second floor. The west elevation contains the door into the second level. The east elevation has an exterior end stone chimney. The interior of the basement contains a cooking fireplace but is otherwise unfinished with a dirt floor. The upper level was plastered with horsehair.

The complex also includes a barrel-roofed concrete block barn with an accompanying barrel-roofed dairy shed. Its principal facade faces south. The gable ends are sheathed in weatherboard. A tool shed and a blacksmith's shop are also located on the property.

8.1 Significance:

The Frederick Eichelberger House is significant in representing stone architecture connected with an early, prosperous milling operation on Owens Creek. The main section of the dwelling house displays elements and details of high style architecture of the early nineteenth century. This is architecturally important in a region that is otherwise predominated by vernacular buildings. The complex includes an stone outbuilding constructed during the period of the house and later agricultural buildings.

The Frederick Eichelberger House stands out in historic context as an important early dwelling house in the area. Its connection with an early mill augments its significance in the development of the region. Several other 2 story stone houses in the Creagerstown Election District can be compared to the Eichelberger House, but this property remains superior as a complex. In particular, the 1830 main section of the house provides a notable example of high style architecture of the early nineteenth century.

Frederick Eichelberger, a German, purchased the property in 1792 from land speculators. The property appears on the 1808 Varles Map as owned by F. Eichelberger. Milling industry at two sites along Owens Creek in close proximity to the house began before 1808. From the 1850s into the 1870s, a merchant and saw mill was operating at the site, indicating a level of some prosperity. A mill is reputed to have operated into the 1920s. The property was purchased in 1973 by William Snyder at which time it was meticulously restored.
